

SAFETY TOOLBOX TALK

Ref:	052	Author:	D Bibby	Date:	07.02.2024
Topic:			PERSONAL HYGIENE		

This briefing is not intended to tell you how to do your jobs, it is designed to help keep you safe. We want everybody to be able to return home safely to their family and friends at the end of each day.

In order to avoid contacting and spreading germs, practicing personal hygiene at your work place is very important. Not only does personal hygiene mean showering regularly and wearing clean clothes (including under garments), it also means doing your best not to spread germs.

Using deodorant or massive amounts of perfume or cologne to mask body odors is not the same as washing regularly to remove dirt and germs that may be on your body. Practicing good personal hygiene at home and at work lessens the chance of being sick for you, your family and your colleagues alike.

You also need to consider action actions that may have an impact on your colleagues working environment. Avoid creating unpleasant odours in the working area.

Below are some personal hygiene “safety tips” you can use both at home and at work. Do not take shortcuts with personal hygiene, just as you should not take shortcuts with safety.

- Thoroughly wash your hands with soap and water before you eat and after using the restroom.
- Never use solvents to clean your hands.
- Cover your mouth when you sneeze or cough.
- If you get cut or lacerated, make sure you wash the wound thoroughly with soap and water.
- Dirty or soiled clothing should not be worn again without first being washed.

It does not take long to ensure your safety and the safety of others by being conscious of your personal hygiene.

Discussion Points

Has anyone any issues with the cleaning products provided (skin conditions)?

Do you know were to find information regarding tetanus boosters?
