

SAFETY TOOLBOX TALK

Ref:	069	Author:	D Bibby	Date:	08.02.2024
Topic:			Driving on Site		

This briefing is not intended to tell you how to do your jobs, it is designed to help keep you safe. We want everybody to be able to return home safely to their family and friends at the end of each day.

Driving your wagon on client sites and in company yards

Every year, there are over 5000 accidents involving transport in the workplace.

About 50 of these result in people being killed.

10 Points to Remember

- Attend site inductions and any safety briefings – these will give you specific information about driving on site and emergency procedures.
- Never move segregation barriers or interfere with any systems that have been provided for the health and safety of pedestrians.
- Always stick to traffic routes – going ‘off-piste’ can lead to:
 - wagons entering dangerous ground and becoming stuck or trapped.
 - heavy traffic passing schools, hospitals, town centres etc
 - breaching planning caveats for our clients’ sites.
 - striking overhead obstructions
- Stick to site speed limits
- Always follow site signs and markings – these will include first aid locations, height restrictions etc.
- Avoid reversing – follow one-way systems and use banksmen whenever needed.
Well managed sites will remove the need for reversing through careful planning.
- Keep your skips down – driving with a raised skip can cause overturning and overhead cable strikes.
- Make sure your beacon is working and switched on
- Make sure your reversing camera is working and clear of dirt or debris
- Make sure your reversing alarm is working

Everyone has a responsibility to ensure their own safety and the safety of others

Report all Near Misses today, before we investigate them as accidents tomorrow

**Discussion Points**

Who is responsible to ensure everything is correct onsite and working correctly?

Where can the speed onsite be found or given?
